WHAT IS WWF SIGHT

WWF-SIGHT is a global intelligence platform which aims to provide an up-to-date high-level understanding of what's happening on the ground. It works by letting people:

ONE

FOCUS ON AN AREA OF INTEREST

TWO

LOAD RELEVANT DATA LAYERS

ENVIRONMENTAL ASSETS

- FOREST COVER
- PA, KBA, MBA, EBSA, WHS
- SPECIES DISTRIBUTION
- WWF PRIORITY ECOREGIONS
- WETLANDS
- RIVERS
- CORAL REEFS
- MANGROVES

DEVELOPMENT ASSETS

- DAMS
- ROADS
- RAIL
- POWERLINES/PLANTS
- SHIPPING
- AGRICULTURE
- MINING
- OIL & GAS

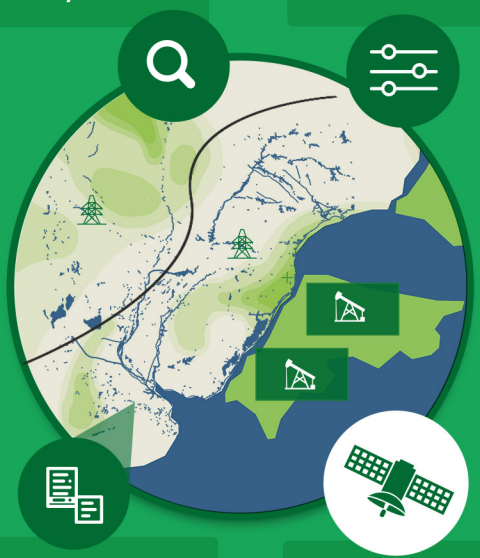
YOU CAN ALSO
Upload your own data or import from the WWF data library

THREE

COMPARE SELECTED DATA LAYERS AGAINST OTHERS

Search for an asset – for example, a particular mining concession – or search by location

Define assets by left clicking on them - a pop-up box will define the key details



Filter the data to variables of interest, such as protected areas by designation or mines by company name

ADD SATELLITE IMAGERY
Provide up-to-date context to what's happening on the ground.

FOUR

GENERATE EVIDENCE USING WWF-SIGHT'S IN-BUILT FUNCTIONALITY

SELECT DATA
Select assets of interest

EXPORT DATA
Export as shapefiles or spreadsheets in CSV format

OVERLAP ASSESSMENTS
Define the area of overlaps between assets of interest

EXPORT MAPS
Create PDF/JPEG/PNG maps

GENERATE REPORTS
Create a report defining overlap between multiple layers

NICHE FEATURES
Calculate forest loss, load geolocation points, draw on the map, change data colours, alter transparency and so much more

ALERT
Set an email notification for a given area
